In the world of Treelings, construction is well underway in preparation for the annual firefly festival! Beautiful, glowing swarms of fireflies may only be released from the highest platforms in the city during the upcoming summer solstice. 6 different guilds reside in the city and will do everything possible to build their own tree as high as possible in each district.

As chief of your district, you decide each round which guild you wish to support in your part of the city. Of course, this is not for entirely selfish reasons - after all, you want to lure the audience to your spectacle on the festival day and send as many fireflies glowing brightly to freedom.

Contents

1 starting player card
108 guild cards in 6 colours (18 per colour)
5 overview cards

5 greetings cards
1 firefly festival card
Game rules
Object of the game

Think carefully about which guild you would like to support when building tree platforms in your district and don’t forget to keep an eye on your neighbours. Because only the highest platforms are used at the firefly festival - and it could end up being those outside of your district.

Setup

The 108 guild cards represent the 6 different guilds established in your city a long time ago. There are 18 cards in the game from each guild, and each of them has a specific way of building platforms on the trees, as well as its own colour.

Shuffle the guild cards face down. Deal 3 cards to each player. Now place these cards face up in your own district, directly in front of you. Overlap cards of the same type on top of each other. This represents the growing tree of the respective coloured guild.

The remaining cards form the draw pile. This is placed in the middle of the table in reach of all players. Count 20 cards from the draw pile and place the firefly festival card face down on top. This card will trigger the end of the game. Now place all remaining cards on top of this to reform the draw pile.

The common market place is in the middle of the table.

Important: Cards in the draw pile are always kept face down. As soon as you draw a card from the draw pile, it is always laid open for everyone to see.
**Example:** How cards are arranged in front of each player:

- **Market**
- **Draw Pile**
- **City District player 1**
- **City District player 2**

**How to play**

The tallest player receives the starting player card and will keep it until the end of the game. Play is carried out in clockwise order.

At the beginning of the game, place 5 cards from the draw pile face up to form the market place in the middle of the table.

On your turn, perform the following action in order. All actions must be carried out.

1) **Fill the market place**
   - If there are fewer than 5 guild cards in the marketplace, draw cards face up until there are exactly 5 once again.

2) **Support the guilds**
   - Now it’s time to bring the guilds to your district.
   - You have two options:
Either:
Take ALL cards from a single guild from the market place and grow them in your district.

or:
Take a card from EACH guild that is present only ONCE in the market place and grow it in your district.

Once placed, cards can no longer be moved in your district.

Example:

In this example, there are several possibilities:
You can take both the blue guild cards or choose to take the green, yellow and brown cards.
However, you can also choose to just take the green OR the yellow OR the brown guild card.

The city districts
Each player has a personal district in front of themselves. As the game progresses, your district expands. When you wish to build guild cards in your district that are not already in front of you, start a new tree on either side of existing trees, but NOT in between. You may only have each
guild represented once in your district. This means that you cannot have more than one of a like-coloured tree. Always lay the guild cards out so that it is easy to see exactly how many cards form each tree.

As soon as a player reveals the firefly festival card, the final round of the game is triggered. Play continues as usual until the start player is reached. However, the game will end before the starting player takes another turn.

**Scoring**

All remaining cards in the marketplace have no effect on end game scoring. A player can only score points through cards in their own district. A tree is only eligible for scoring depending on the height of both neighbouring trees (those directly adjacent to the left and right of the tree).

**Warning:** This applies not only to your own trees, but also to the trees of your neighbouring players! The left-most tree of the player on your right also influences your own scoring, as it is considered an adjacent tree. The same applies to the player on your left.
You can only score a tree if it is at least as tall as the two directly adjacent trees. For each tree that is eligible to score, you get one point for each card that forms the tree.

**Example:**
Matilda gains 8 points. The outermost trees of her neighbouring players have no influence on her result as her trees are higher or at least the same height.

Kyra gains 5 points. She cannot score her right-most tree because the player on her right has a higher tree.

The player with the most points is the winner. In the event of a tie, the winner is the player that was eligible to score more trees in their district. If there is still a tie, all tied players share the victory.
Greetings cards

You might be wondering what to do with the 5 greetings cards in the box? There are no limits to your imagination: use the card as a trophy for the winner of a game or give it to a loved one as a lucky charm. You can also associate the cards to a nice memory, place them in your wallet and look at them whenever you need a smile.
